**Department Overview:**

The Department of Statistics and Data Science, established in the year 2022, strives to provide a dynamic research environment and effective education, including excellent training in scientific data collection, data management, methods and procedures of data analysis. Our curriculum adheres to worldwide standards to provide the best possible research and educational/Industry opportunities.

It offers a perfect blend of statistical knowledge with tools and data science techniques required to explore, analyze and interpret the complex data of the modern world. The curriculum and teaching pedagogy foster higher-order thinking and research skills, which equip students for the dynamic and ever-evolving data industry. Well-designed co-curricular activities organized by the department are aimed at the holistic development of students. The skills imparted through various programs offered by the department help in interdisciplinary research for the benefit of the society.

**Vision and Mission:****Vision:**

Excellence and Service

**Mission:**

To develop statistics and data science professionals capable of enriching sustainable and progressive society for achieving common national goals.

**Programme Description:**

Data Science is popular in all academia, business sectors, and research and development to make effective decision in day to day activities. MSc in Data Science is a two year programme with four semesters. This programme aims to provide opportunity to all candidates to master the skill sets specific to data science with research bent. The curriculum supports the students to obtain adequate knowledge in theory of data science with hands on experience in relevant domains and tools. Candidate gains exposure to research models and industry standard applications in data science through guest lectures, seminars, projects, internships, etc.

## **Programme Outcomes**

PO1: Problem Analysis and Design: Ability to identify analyze and design solutions for data science problems using fundamental principles of mathematics, Statistics, computing sciences, and relevant domain disciplines.

PO2: Enhance disciplinary competency and employability: Acquire the skills in handling data science programming tools towards problem solving and solution analysis for domain specific problems.

PO3: Societal and Environmental Concern: Utilize the data science theories for societal and environmental concerns

PO4: Professional Ethics: Understand and commit to professional ethics and professional computing practices to enhance research culture and uphold the scientific integrity and objectivity

PO5: Individual and Team work: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary environments.

PO6: Engage in continuous reflective learning in the context of technology advancement: Understand the evolving data and analysis paradigms and apply the same to solve the real life problems in the fields of data science.

## **Programme Eligibility:**

A candidate who has passed an Undergraduate degree with 50 % aggregate marks from any University in India or abroad that is recognized by UGC / AIU. Students must fulfill either criteria A or B described below in order to be eligible for the programme:

A. Bachelor of Computer Applications (BCA) / BSc Computer Science/ BSc Data Science / BE Computer Science  
OR

B. BE/B Tech/Under Graduate degree in Science with any two of the following subjects as major or minor (minimum of two years of learning)

1. Computer Science
2. Mathematics
3. Statistics

## **MDS 131: RESEARCH METHODS IN DATA SCIENCE**

**Total Teaching Hours for Trimester: 60**

**No of hours per week: 5L-0T-0P**

**Max Marks: 100**

**Credits: 4**

**Course Type: Major**

### **Course Description**

To assist students in planning and carrying out research work in the field of data science. The students are exposed to the basic principles, procedures and techniques of implementing a research project. The course provides a strong foundation for data science and the application area related to it. Students are trained to understand the underlying core concepts and the importance of ethics while handling data and problems in data science.

**Course Outcomes:** Upon completion of the course students will be able to

<b>No.</b>	<b>Course Outcomes</b>	<b>LRNG Needs</b>
<b>CO1</b>	Understand the essence of research and the importance of research methods and methodology	<b>National</b>
<b>CO2</b>	Explore the fundamental concepts of data science	<b>Global</b>

## **MDS161B: INTRODUCTION TO PROBABILITY AND STATISTICS**

**Total Teaching Hours for Semester: 30**

**No of hours per week: 3L-0-0P**

**Max Marks: 50**

**Credits: 2**

**Course Type: Foundation Elective**

### **Course Description**

This course is designed to introduce the historical development of statistics, presentation of data, descriptive measures and cultivate statistical thinking among students. This course also introduces the concept of probability.

**Course Outcomes:** Upon completion of the course students will be able to

<b>No.</b>	<b>Course Outcomes</b>	<b>LRNG Needs</b>
<b>CO1</b>	Demonstrate, present and visualize data in various forms, statistically.	<b>Global</b>
<b>CO2</b>	Understand and apply descriptive statistics.	<b>Global</b>

## **MDS271: Database Technologies**

**Total Teaching Hours for Semester: 75**

**No of hours per week: 3L-0T-4P**

**Max Marks: 100**

**Credits: 4**

**Course Type: Major**

### **Course Description**

The main objective of this course is fundamental knowledge and practical experience with database concepts. It includes the concepts and terminologies which facilitate the construction of relational databases, writing effective queries, comprehending data warehouse and NoSQL databases and its types.

**Course Outcomes:** Upon completion of the course students will be able to

<b>No.</b>	<b>Course Outcomes</b>	<b>LRNG Needs</b>
<b>CO1</b>	Demonstrate various databases and compose effective queries	Global
<b>CO2</b>	Understanding the process of OLAP system construction	Global
<b>CO3</b>	Develop applications using Relational and NoSQL databases.	Global

### **Cross Cutting Issues:**

<b>Employability</b>	<b>Skill development</b>	<b>Entrepreneurship</b>	<b>Gender</b>	<b>Environment</b>	<b>Sustainability</b>	<b>Human Values and Professional Ethics</b>

## **MDS272: INFERENCE STATISTICS**

**Total Teaching Hours for Semester: 75**

**No of hours per week: 3L-0-4P**

**Max Marks: 100**

**Credits: 4**

**Course Type: Major**

### **Course Description**

Statistical inference plays an important role when analyzing data and making decisions based on real-world phenomena. This course aims to teach students to test hypotheses and estimate parameters for real life data sets.

**Course Outcomes:** Upon completion of the course students will be able to

<b>No.</b>	<b>Course Outcomes</b>	<b>LRNG Needs</b>
<b>CO1</b>	Demonstrate the concepts of population and samples	Global
<b>CO2</b>	Apply the idea of sampling distribution of different statistics in testing of hypothesis	Global

## MDS332C: STOCHASTIC PROCESSES

**Total Teaching Hours for Semester: 45**

**No of hours per week: 4L-0-0P**

**Max Marks: 100**

**Credits: 3**

**Course Type: Discipline Specific Elective**

### Course Description

This course is designed to introduce the concepts of theory of estimation and testing of hypotheses. This paper also deals with the concept of parametric tests for large and small samples. It also provides knowledge about non-parametric tests and its applications.

**Course Outcomes:** Upon completion of the course students will be able to

No.	Course Outcomes	LRNG Needs
CO1	Understand and apply the types of stochastic processes in various real-life scenarios.	Global
CO2	Demonstrate a discrete space stochastic process in a discrete index and estimate the evolving time in a state.	Global
CO3	Apply probability arguments to model and estimate the counts in continuous time.	Global
CO4	Evaluate the extinction probabilities of a generation.	Global
CO5	Development of renewal equations in discrete and continuous time.	Global
CO6	Understand the stationary process and application in Time Series Modelling	Global

## MDSVAC1: CLOUD ESSENTIALS

**Total Teaching Hours for Semester: 30**

**No of hours per week: 2L-0T-0P**

**Max Marks: 50**

**Credits: 2**

**Course Type: Major**

### Course Description

This on-line course gives students an overview of the field of Cloud Computing, its enabling technologies, main building blocks, and hands-on experience through projects utilizing public cloud infrastructures (Amazon Web Services (AWS) and Microsoft Azure). The student learns the topics of cloud infrastructures, virtualization, software defined networks and storage, cloud storage, and programming models.

**Course Outcomes:** Upon completion of the course students will be able to

No.	Course Outcomes	LRNG Needs
CO1	Understand the <i>core concepts</i> of the cloud computing paradigm.	Global
CO2	Apply fundamental concepts of cloud <i>infrastructures, cloud storage</i> and in storage systems such as Amazon S3 and HDFS.	Global
CO3	Analyze various <i>cloud programming models</i> and apply them to solve problems on the cloud.	Global
